Geometria di taglio

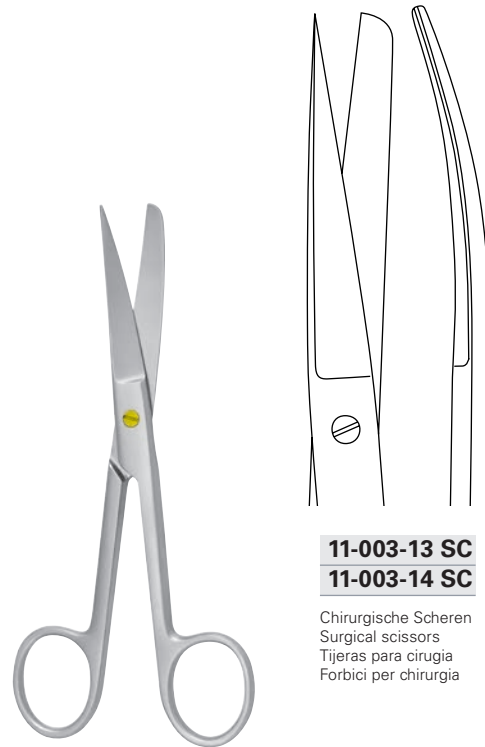

- Bei SUPERCUT Scheren hat ein Blatt die Schneidegeometrie eines Messers, was einen mühelosen, messerartigen und glatten Schnitt ermöglicht.
- Die Mikroverzahnung am anderen Scherenblatt verhindert das Abgleiten des Gewebes.
- SUPERCUT Scissors have one razor blade which allows an easy and clean cut.
- The micro serration at the opposite blade prevents sliding off the tissue.
- Las tijeras SUPERCUT tienen una hoja geométrica cortante, lo que posibilita un corte liso y sin esfuerzo en el tejido.
- El microdentado opuesto a la hoja lisa disminuye el deslizamiento del tejido.
- Le forbici SUPERCUT hanno una lama con sezione a coltello. Questo rende facile anche il taglio del tessuto meno delicato.
- La microdentellatura nell'altra lama garantisce una presa sicura del tessuto da tagliare.

Kennzeichnung: schwarzes Finish, goldene Schraube
Characteristic: black finish, golden screw
Característica: superficie negro, tornillo dorado
Caratteristica: finitura nero, vite dorata

Schneidegeometrie
Cutting geometry
Geometria del corte
Geometria di taglio

Bei SUPERCUT TITAN-NITRIT Scheren hat ein Blatt die Schneidegeometrie eines Messers, was einen mühelosen, messerartigen Schnitt ermöglicht.

Beschichtungen aus TITAN-NITRIT:

- Durch die elektro-physikalische Glättung wird die Gleitfähigkeit der Instrumente stark verbessert, was einen geringeren Abrieb und damit weniger Verschleiß zur Folge hat.
- Die außergewöhnliche Glätte führt zu einem leichten Gleiten der Scherenblätter auch bei höchster Beanspruchung.
- Dank der glatten Oberfläche wird die Reinigung der Scheren wesentlich erleichtert.
- Durch die Beschichtung erhöht sich die Oberflächenhärte um das 3-5 fache. Dies vervielfacht die Standzeit der Schneidekanten und macht die Instrumente äußerst kratzfest und schlagzäh.
- Die Beschichtung ist in hohem Maße inert, d.h. die molekulare Bindung ist chemisch sehr widerstandsfähig. Dadurch werden unerwünschte Reaktionen beim Eintauchen in Lösungen oder bei der Sterilisation vermieden.
- Auch beim intensiven Einsatz in sauren oder basischen Lösungen bleibt die hohe Glätte der Oberfläche erhalten.
- Die inerte Beschichtung ist auch bei hohen Temperaturen stabil.

Eigenschaften von TIN - Beschichtungen:

- 3-5 fache Härte gegenüber gehärtetem Stahl
- glatte, dichte, keramische Materialstruktur
- edle Oberflächenoptik, weniger Reflexion
- antikorrosive, leicht zu reinigende Oberfläche
- wesentlich beständiger gegen Lösungsmittel und aggressive Flüssigkeiten als unbeschichteter Stahl
- kratzbeständig
- temperaturbeständig
- hohe Haftfestigkeit
- geringe Reibung

Scissors with SUPERCUT TITANIUM-NITRITE have one razor blade which allows an easy and clean cut through tissue.

TITANIUM NITRITE coatings:

- The glide quality of the instruments is considerably improved by electrophysical smoothing, resulting in less abrasion and reduced wear.
- The exceptional smoothness means that the scissor blades slide easily, even under maximum stress.
- The smooth surface makes the scissors much easier to clean.
- The coating makes the surface three to five times harder. This multiplies the lifetime of the cutting edges and makes the instruments extremely resistant to scratches and impacts.
- The coating is largely inert, which means that the molecular binding is very chemically resistant. This prevents undesirable reactions when the instruments are immersed in solutions or sterilised.
- Even under intensive use of acid or alkaline solutions, the high level of surface smoothness is retained.
- The inert coating is also stable at high temperatures.

Characteristics of TIN - coatings:

- 3-5 times harder than hardened steel
- smooth, impervious, ceramic material structure
- high-grade surface finish, reduced reflection
- anti-corrosive, easy to clean surface
- far more resistant to solvents and aggressive fluids than uncoated steel
- scratch-resistant
- temperature-resistant
- high level of adherence
- low friction

Las tijeras SUPERCUT con revestimiento de NITRITO DE TITANIO tienen una de las hojas con la geometría de corte de un bisturí, lo que permite realizar la incisión sin esfuerzo, como si se tratara realmente de un bisturí.

Revestimiento de NITRITO DE TITANIO:

- El alisado electrofísico mejora considerablemente la capacidad de deslizamiento del instrumental, por lo que se produce menor abrasión y, en consecuencia, un desgaste más reducido.
- Gracias a su extraordinaria suavidad, las hojas de las tijeras se deslizan fácilmente, incluso en las condiciones más difíciles.
- Además, esta superficie lisa facilita también las operaciones de limpieza.
- Por otro lado, el revestimiento aumenta de tres a cinco veces la dureza de la superficie, lo que también alarga la duración de los cantos de corte y protege enormemente los instrumentos frente al rayado o a los golpes.
- El revestimiento es prácticamente inerte, es decir, el enlace molecular es químicamente resistente, lo que excluye la posibilidad de que se produzcan reacciones no deseadas al introducir las tijeras en ciertas disoluciones o esterilizarlas.
- La suavidad y lisura de la superficie se mantiene incluso con un uso intensivo en disoluciones ácidas o básicas.
- El revestimiento inerte también es estable a altas temperaturas.

Propiedades de los revestimientos de nitrato de titanio:

- de tres a cinco más de dureza que el acero endurecido
- estructura del material cerámico compacta y lisa
- aspecto exterior impecable, con menos reflexión
- superficie anticorrosiva y fácil de limpiar
- mucho más resistente a disolventes y líquidos agresivos que el acero no revestido
- resistente al rayado
- resistente a los cambios térmicos
- alta fuerza adhesiva
- poca fricción

Le forbici SUPERCUT in NITRITO di TITANIO hanno una lama con la geometria di taglio di un coltello che consente di eseguire tagli agevoli, puliti e precisi come un coltello.

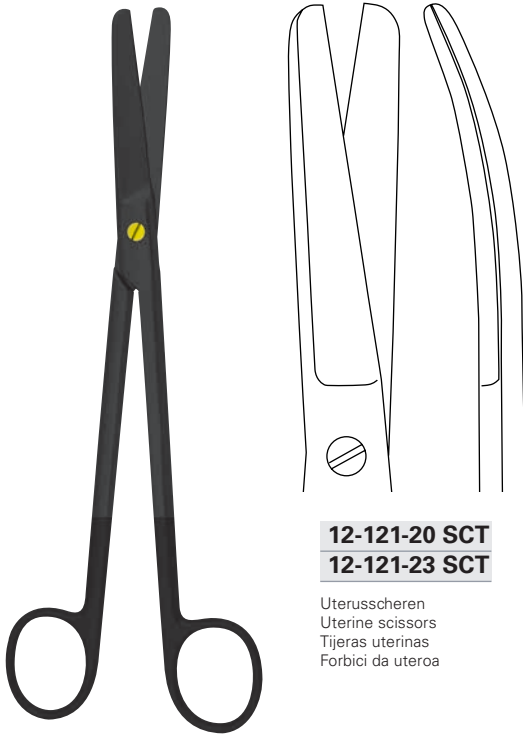

Rivestimento in NITRITO di TITANIO:

- La capacità allo scorrimento degli strumenti è notevolmente migliorata grazie alla levigatura elettro-fisica: ciò significa una ridotta abrasione e quindi una minore usura.
- L'eccellente levigatura consente un agevole scorrimento delle lame della forbice anche nelle sollecitazioni più estreme.
- La pulizia delle forbici è notevolmente facilitata grazie alla superficie liscia.
- Il rivestimento aumenta la durezza della superficie di 3-5 volte. Ciò moltiplica la durata utile degli spigoli taglienti e rende gli strumenti estremamente resistenti ai graffi e agli urti.
- Il rivestimento è altamente inerte, ciò significa che il legame molecolare è chimicamente molto resistente. Questo evita reazioni indesiderate durante l'immersione in soluzioni o nel corso dell'operazione di sterilizzazione.
- La grande levigatezza delle superfici non viene intaccata neanche con un uso intenso in soluzioni acide e basiche.
- Il rivestimento inerte è stabile anche ad alte temperature.

Proprietà di rivestimenti in TIN:

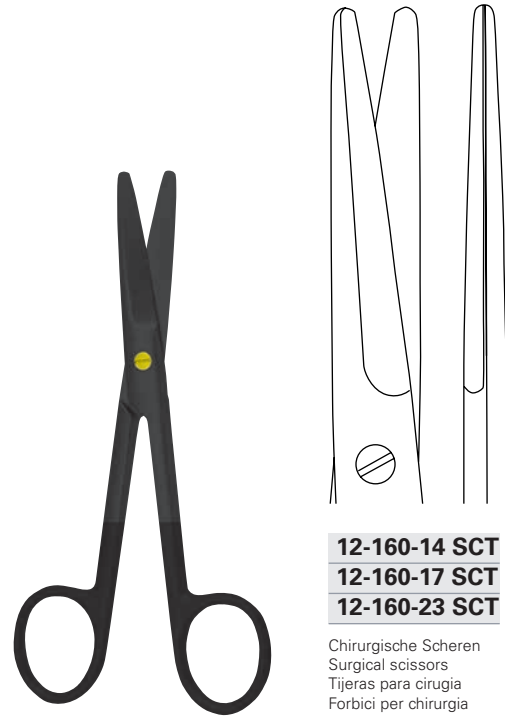

- durezza 3-5 volte superiore rispetto all'acciaio temprato
- struttura del materiale levigata, compatta e ceramizzata
- superficie di ottica pregiata, meno riflettente
- superficie anticorrosione, facile da pulire
- notevolmente più resistente dell'acciaio non rivestito nei confronti di solventi e liquidi aggressivi
- antigraffio
- termostabile
- elevata adesività
- basso attrito
